

SCCM - How to self-grant admin rights on your workstation

Article Number: 1047 | Last Updated: Fri, May 22, 2020 at 2:27 PM

If you're looking to install some software or perform a task that requires administrator rights, follow the below directions to elevate your account temporarily.

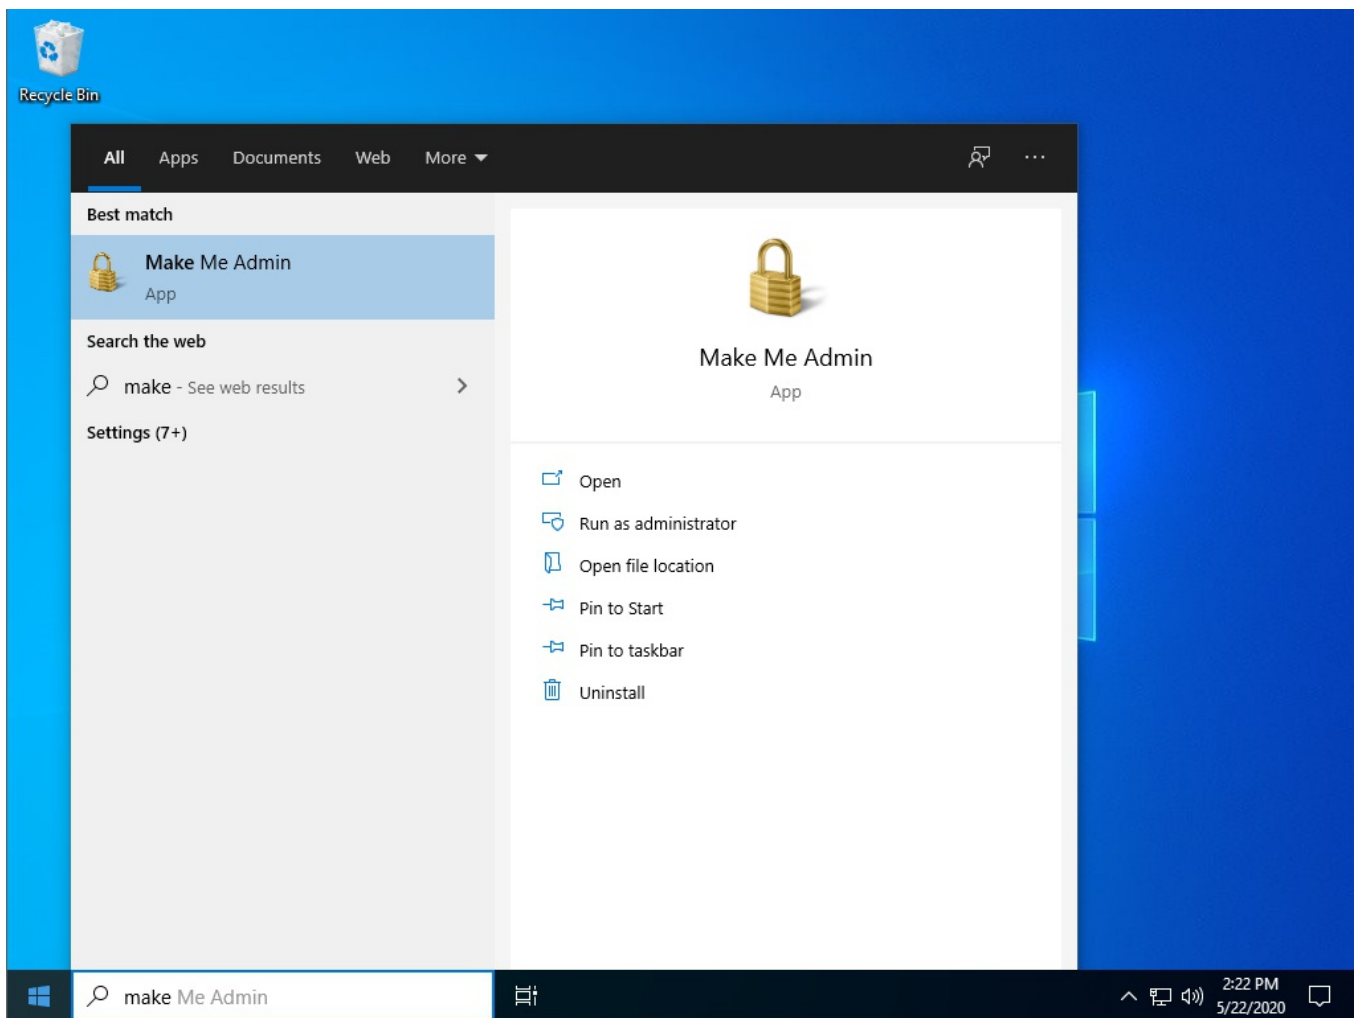

Requirements:

To perform self-elevation of your account, you must be using a computer that is:

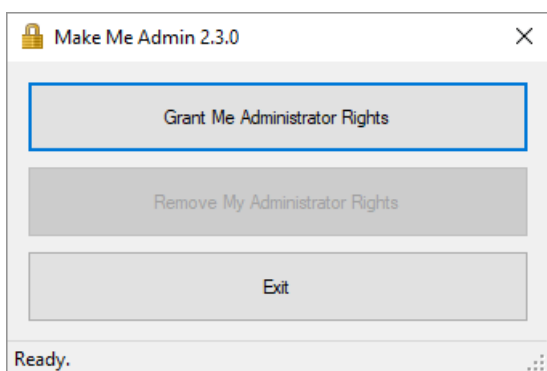

- Running Windows 10
- Supported by ITServices [has an Asset or Service tag]

Instructions:

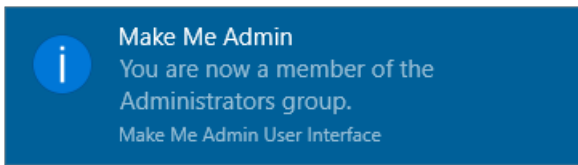

1. From your Start Menu, begin typing **Make Me Admin** and Open the Application

2. You will see the following screen, select **Grant Me Administrator Rights**

3. Next, you will see a notification from Windows in the bottom right corner of your screen indicating you are now an administrator:

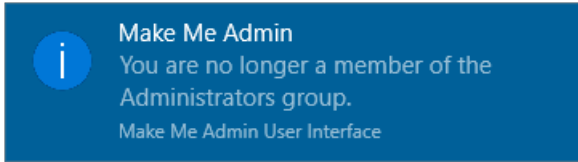

Make Me Admin
You are now a member of the
Administrators group.
Make Me Admin User Interface

The Time
The Date

While you are an administrator, any task requiring those rights may ask you to authenticate using your EAD/CWL credentials.

Note: You will remain an administrator for 10 minutes, at which point your account will be reverted back to its normal privileges. You will get another notification to let you know that you are no longer an administrator:

Make Me Admin
You are no longer a member of the
Administrators group.
Make Me Admin User Interface

The Time
The Date

 For more information or assistance, please contact the [ITServices Helpdesk](#) - 250.807.9000 or 855.807.9001.
