

## How does the new videoconference (VC) dialling system work?

Article Number: 259 | Last Updated: Mon, Jun 4, 2018 at 8:24 AM

I've heard an upgrade has happened to our VC system for security and to enable five-digit calling to Vancouver; what has changed?

**Outbound** calls from a converted room to non-UBC videoconference locations: no change

**Inbound** calls to a converted room (meaning how do outside folks dial into our UBCO rooms?):

- 1) Call the gatekeeper at 206.87.24.150
- 2) When prompted, enter the room's extension plus #

**Calls between most UBCO and UBCV converted rooms** need only use the five-digit extension of the room being called; no need to dial the gatekeeper first.

List of extensions for rooms already converted on both campuses is found at this link:
