

How do I work with ISO files?

Article Number: 893 | Last Updated: Wed, Sep 5, 2018 at 9:10 AM

Follow these instructions to mount, burn, or unpack an ISO file.

Instructions:

An ISO file is an image of a CD or DVD. The most common ways to work with these files are:

- Windows 8/10 or macOS will open these files natively when they are double clicked. A new drive letter will be created showing the contents of the ISO.
- [Virtual CloneDrive](#) is a third party Windows package that can be used on Windows 7 to mount CD/DVD image files onto a Virtual drive and work with them as though they were on a disc in your regular DVD/CD drive.
- [Rufus](#) can be used to create a bootable USB device from an ISO, or to simply replicate the ISO onto a USB drive for software installs.
- [7-Zip](#) or similar software can be use to extract individual files from an ISO.
- [ImgBurn](#) or similar software can be used to burn an ISO onto a blank DVD.

For more information or assistance, please contact the [ITServices Helpdesk](#) - 250.807.9000 or 855.807.9001.
