

## transformers color coding

Article Number: 939 | Last Updated: Wed, Dec 12, 2018 at 12:11 PM

I have been working in organizing the color coding for our installers and have the most current updates for you.

I have added a PDF with the color coding map so that finding each type of transformer might be more effective. (COLORS: green, green dotted, white, white dotted)

I have also added pictures of each Bin and the labels for them. As per Nathen request I have put all the 24V transformers in one bin ( White dotted transformer bin 13V or over)

Also there is one picture showing the current location of the bins at our storage area.

If you have got any questions please don't hesitate asking me.

Kind regards.
